EDUCATION

Narula Institute of Technology	2025 – 2029 [Ongoing]
<i>B.Tech in Computer Science and Engineering – Artificial Intelligence and Machine Learning</i>	<i>GPA: 7.66/10</i>
NIOS	2025
<i>Higher Secondary – Class XII</i>	<i>73%</i>
Banerjeedanga High School	2022
<i>Secondary Education – Class X</i>	<i>77%</i>

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, SQL
Backend: FastAPI, REST APIs, Spring Boot
Databases: PostgreSQL, MongoDB
Frontend: React, Vite, React Router, HTML, CSS
Cloud & DevOps: Docker, GitHub Actions, Vercel, Linux
Frameworks: Pydantic, SQLAlchemy, Uvicorn, Redis, Numpy, Pandas, Pytorch
Concepts: Data Structures & Algorithms, Object-Oriented Programming, System Design, DBMS, Computer Networks, REST Architecture

PROJECTS

Distributed URL Shortener GitHub

Python, FastAPI, PostgreSQL, Redis, SQLAlchemy, Docker

- Developed a RESTful URL shortening service using FastAPI with PostgreSQL persistence and Redis-based caching for low-latency URL redirection.
- Implemented short-code generation, URL expiration, redirect handling, validation, and database-backed URL management.
- Designed API endpoints using Pydantic schemas and SQLAlchemy ORM with structured error handling and dependency-based database sessions.
- Containerized the backend and database services using Docker and configured the application for cloud deployment.

Medical Report AI Analyzer GitHub

Python, FastAPI, PostgreSQL, OCR, RAG, LLM, Docker

- Developing a document-processing platform that extracts structured information from medical reports using OCR and provides AI-assisted analysis.
- Designed a FastAPI backend for secure document uploads, request validation, asynchronous processing, and structured API responses.
- Integrated PostgreSQL for persistent storage and designed a pipeline connecting document extraction, retrieval-augmented generation, and AI analysis.
- Applying backend engineering practices including authentication, error handling, logging, testing, containerization, and secure data storage.

Zerodha Kite Clone GitHub

Java, Spring Boot, React, Vite, REST APIs, Kite Connect API

- Developed a full-stack trading platform clone using Spring Boot and React, implementing REST APIs for authentication, market data, and trading instruments.
- Integrated the Kite Connect API for OAuth authentication, live market quotes, and historical OHLCV market data.
- Built a live watchlist, NIFTY 50 ticker, market overview, interactive candlestick charts, Orders, Holdings, Positions, and Funds modules.
- Applied object-oriented programming, layered backend architecture, API integration, and client-side routing to build a maintainable full-stack application.

EXPERIENCE

JPMorganChase – Software Engineering Job Simulation Forage

Virtual Experience

- Completed a software engineering simulation involving practical development workflows, debugging, problem-solving, and engineering tasks.
- Applied software development practices while analyzing requirements and implementing solutions in a simulated engineering environment.
